About this Wiki

On this Wiki space you will find information about standards and application profiles used in the SURFshare program.

> You can refer to this page as: http://purl.org/REP/standards/. You can use http://purl.org/REP/standards/* as a proxy.
> Where * is a sub-page in this wiki.
> ex. http://www.surffoundation.nl/wiki/display/standards/DAI/ can be written as http://purl.org/REP/standards/DAI/

Read more about this project on: SURFshare Standards Coordination
Within the SURFshare program there are many activities in which existing standards are reused or new standards are developed. To prevent standards from being overseen, resulting in reinventing the wheel in developing an application profile, several activities will have to be started from which all parties of the SURFshare program benefit. The SURFshare standards are not limited to the repositories, but extend the scope to the entire SURFshare program in which aspects of the Academic Information Domain are addressed.
The SURFshare program consists of

- Enhanced Publications
- Collaboratories
- Review and impact
- Infrastructure
- Permanent access
- And HBO dissemination
