Why register data?

Section 4 After the research

Article 11.

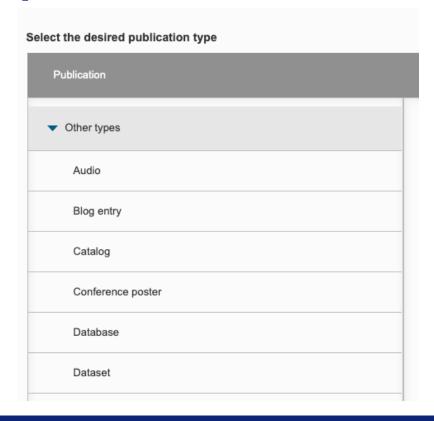

Digital research data that form the basis for a scientific publication are registered at the time of publication and managed according to the FAIR principles.

2021 Leiden Data Management Regulations

https://www.organisatiegids.universiteitleiden.nl/binaries/content/assets/ul2staff/reglementen/onderzoek/research-data-management-regulations-leiden-university.pdf

But...

- Data registration is not yet required nor encouraged
- No clear guidelines provided
- Data sets not visible as such in profiles on web site
- LUCRIS (=Converis) considers data sets as other publications

Example...

Can Elsevier data monitor help to improve registration of data sets?

- Project with Elsevier: the <u>Elsevier Data Monitor</u>
- Main goal: Investigate if the Data Monitor contains the metadata fields needed to connect to LUCRIS for registration
- Method:
 - Elsevier has mined several data sources for data sets connected to Leiden University
 - For some a coupling to ORCID could be made -> match with Faculty and Institute
- Pending decision:
 - Automatic registration or manually by researchers/faculties or a combination?
- Preliminary results in this presentation feedback is very welcome!

A big thank you to Ben Companjen for facilitating the data analysis!

Preliminary results: Data Monitor metadata fields allow for connection with LUCRIS

Name	Explanation	
Dataset DOI	The Digital Object identifier of the dataset	
Persistent Identifier	The persistent identifier of the dataset	
Repository name	The name of the repository	
Dataset title	The title of the dataset	
Dataset URL	The URL of the dataset	
Description	The description of the dataset	
Contributors	The names of the auteurs of the dataset	
Publication date	The date of publication of the dataset	
Linked	Denotes if there is a scientific article linked to	
	the dataset	
Article DOIs	The Digital Object identifier of the scientific article	
Journals	The scientific journal	
Data Types	The different types of data in the dataset	
Institutional Original Contributors	The names of the Leiden authors	
Institutional Enriched Contributors	The names and unique identifiers of the Leiden authors	

Number of datasets

Year published	Records
2016	239
2017	349
2018	11.261*
2019	554
2020	684
2021	271
Total	13.358

^{*}Most are spectra within the same study that have been registered as separate datasets and not as a collection in the repository

Number of datasets with link to a scientific publication (roughly 50%)

Year published	Records with link to publication
2016	158
_010	
2017	269
2018	277
2019	347
2020	358
2021	152
Total	1561

Top 15 repositories 2016-2021

Leibniz-Institut für Astrophysik Potsdam (AIP)	10852
4TU.Centre for Research Data	698
figshare Academic Research System	665
Strasbourg Astronomical Data Center	318
figshare SAGE Publications	208
The Cambridge Structural Database	156
EASY	99
DRYAD	90
DataverseNL	69
Harvard Dataverse	41
Zenodo	34
Mendeley Data	32
RCSB-PDB	25
Humanities Commons	14

(Meta)data quality

- 1. Manual (meta)data analysis 5% of records per year
- 2. Most frequent/significant problems:
 - 1. Dataset not from Leiden University
 - 2. Enriched contributor field empty (states detailed author information, like ORCID)

Only 82 of 668 records had information about LEI author and identifier (Scopus ID or ORCID). This problem is related to the metadata of the data repositories: only 7 of 16 repositories (in this sample of 5 % of records per year) passes on author ID information to Data Monitor.

Elsevier is working on these problems. Most of the datasets that were wrongly accredited to Leiden are now removed. Enriching author information will be done for example by analysing the linked publication.

Next steps

- Evaluate the project results ongoing
- Reach go or no-go decision for integration of the Elsevier Data monitor with LUCRIS
- Update the Research Data Services catalogue with new repositories
