

An infographic on a light blue background with a network of dotted lines and various icons. The central focus is a large orange rounded rectangle containing the text 'SEND MEDICAL DATA SECURELY USING ENCRYPTION'. Above this rectangle is a smaller orange rounded rectangle with a white microscope icon. To the left of the central rectangle is an orange rounded rectangle with a white folder icon. To the right is an orange rounded rectangle with a white document icon. The background is filled with smaller, semi-transparent versions of these icons (documents, folders, keys) connected by dotted lines, suggesting a secure data flow.

SEND MEDICAL
DATA **SECURELY**
USING ENCRYPTION

SEND YOUR FILES **SECURELY** USING **SURF FILESENDER**

For large and small files

SURFfilesender lets you send and receive large files, like research data files, quickly and easily. Smaller files containing sensitive information can also be shared securely using encryption.

Secure files using encryption

The files you work in on a daily basis are valuable and often contain privacy-sensitive information. This makes it crucial for you to maintain control over access to these data. Ensure your files can't end up in the wrong hands by always sending sensitive files of up to 250 MB securely, using encryption.

To encrypt a file, all you need to do is tick the 'Encrypt this file' option on the upload page. Enter a strong password and notify the recipient of the password via a means other than email, for instance by telephone or text message. Chrome, FireFox and Internet Explorer 10 and up support encrypted uploading and downloading.

Fast and user-friendly

Using SURFfilesender, you can conveniently share files with other SURFfilesender users and guest users. The only thing you and the recipient need is an up-to-date browser.

Stored in the Netherlands

Files uploaded in SURFfilesender will be stored in the Netherlands for up to 21 days.

SURFfilesender in brief

- Maximum number of recipients: 100 email addresses
- Maximum number of files per upload: 1 (to send multiple files, compress them in a ZIP file)
- Maximum file size per upload:
 - o with encryption: 250 MB
 - o without encryption: 500 GB
