

SEND LARGE FILES
SECURELY,
FAST AND EASILY

SEND YOUR FILES **SECURELY** USING **SURF FILESENDER**

For large and small files

SURFfilesender lets you send and receive large files, like research data files, quickly and easily. It's also suitable for smaller files such as reports.

Secure files using encryption

You can send sensitive files of up to 250 MB extra securely using encryption. To encrypt a file, all you need to do is tick the 'Encrypt this file' option on the upload page. Enter a strong password and notify the recipient of the password via a means other than email, for instance by telephone or text message. Chrome, FireFox and Internet Explorer 10 and up support encrypted uploading and downloading.

Fast and user-friendly

Using SURFfilesender, you can conveniently share files with other SURFfilesender users and guest users. The only thing you and the recipient need is an up-to-date browser. SURFfilesender is connected to SURFconext, so you can easily log in using your own institutional account.

Stored in the Netherlands

Files uploaded in SURFfilesender will be stored in the Netherlands for up to 21 days.
