

How to connect your service

Connecting your service to SURFconext consists of a [contractual](#) and a [technical](#) part that can be executed in parallel. The exact procedure depends on whether you are a commercial vendor or an institution (a member of the SURFnet community).

General information

If you are new to SURFconext and only need a global overview of SURFconext you might want to read [this page](#). You can also view a [webinar to connecting an SP to SURFconext](#) on the [Coöperatie SURF](#) Youtube Channel.

Technical information

If you are a software engineer and you need to know more about SAML, OpenID Connect, etc, you probably want to read our [technical](#) part. Just don't forget there is a [contractual](#) part!
