

urn:schac:personalUniqueCode:nl:*

Introduction

This page describes registrations in the URN-space `urn:schac:personalUniqueCode:nl`.

These values are used to express specific types of identification numbers (as described below) for use with the following attribute:

- `urn:mace:terena.org:attribute-def:schacPersonalUniqueCode` (deprecated)
- `urn:schac:attribute-def:schacPersonalUniqueCode`
- `urn:oid:1.3.6.1.4.1.25178.1.2.14`

See the [SCHema for ACademia Wiki](#) for more information about this attribute. The upstream registry for the namespace `urn:schac:personalUniqueCode:*` can be found at <https://wiki.refeds.org/display/STAN/SCHAC+URN+Registry>. For examples and notes for usage in SURFconext, see [Attributes in SURFconext](#).

Syntax

Delegations in this space are of the following form:

- `urn:schac:personalUniqueCode:nl:<scope>:*`

where

- `<scope>` identifies the scope for the identifier. Currently, only `local` is allowed, which specifies that the identifier is meant for use within a specific institution only.

For the `local` scope, the urn is of the following form:

- `urn:schac:personalUniqueCode:nl:local:<organisation_id>:<id_type>:<id_token>`

where

- `<organisation_id>` identifies the organisation which has issued the specified identifier. The format is a domain name as specified in [RFC 1035](#). For use in SURFconext, this identifier **MUST** be equal to the organisation's [schacHomeOrganization](#).
- `<id_type>` identifies the type of the identifier. The following values are allowed:
 - `employeeid`: the following `id_token` specifies an employee of the organisation
 - `studentid`: the following `id_token` specifies a student of the organisation
 - `memberid`: the following `id_token` specifies a person with some kind of generic membership of the organisation. This could be used by organisations which use a common identifier for employees and students.
- `<id_token>` is the internal identifier of the specified type, issued by the specified organisation. Note that the identifier should be a proper URN, so the `<id_token>` may only consist of the characters specified in section 2.2 of [RFC2141](#), i.e. only the following are allowed:
 - lower case letter (a-z)
 - capital letters (A-Z)
 - numbers (0-9)
 - the following special characters: () + , . = @ ; \$ _ ! * ' -
