

IdP Discovery - WAYF

Generally your service will be available for more than one organization. When a user logs in, his Identity Provider must be determined. This is called IdP Discovery and is done by a Where-Are-You-From (WAYF) selection page.

You can use:

- [WAYF page from SURFconext](#) (= default)
- or create your own one.

Please have a look at the excellent [Refeds Discovery Guide](#) on how to implement the best sign-in experience!
