

CManage Configuration Options

On [End user documentation SCZ CManage](#) we've documented the steps per role and links to CManage documentation.

On this page you'll find additional information about the CManage configuration options. Depending on your environment and role, you'll find those when you've successfully signed in to SCZ CManage (via <https://comanage.pilot.scz.lab.surf.nl/registry/>) and a CO has been selected. The amount of options you will see may vary. You find the CManage options by clicking in the main menu on "Configuration".

You'll find an overview of the CManage configuration options below. Each configuration options contains a direct link to the manual. You'll be redirected to the Internet2 Wiki or the SURFnet Wiki page.

CO Settings	Extended Types	Pipelines
Attribute Enumerations	Identifier Assignments	Provisioning Targets
Authenticators	Identifier Validators	Self Service Permissions
COUs	Localizations	Services
Enrollment Flows	Message Templates	Terms and Conditions
Expiration Policies	CO Navigation Links	Themes
Extended Attributes	Organizational Identity Sources	Service Token Settings
