New features

This page will show you anything new to the SP Dashboard we feel is worth sharing and awesome. Check this page every now and again to get the most of SURFconext! The changelog can be found here.

2023

It is now possible for production entities to specify which institutions you want to give access to your service. Off course, the institution will have to release the attributes before the connection can be made.

➕	Institution access

Create connection request

Enter below the details of the institution(s) you wish to give access to your service. Use the + button to add more than one institution. Submitting the form sends a request to SURFconext support team. They will contact the appropriate people at the institution and request that the connection be established.
For more information on this process, see this page (Dutch).

2022

It is now possible to request changes for production entities.

👁️	Change Request

2021

The landing page has been revamped. All information you need on one single page.
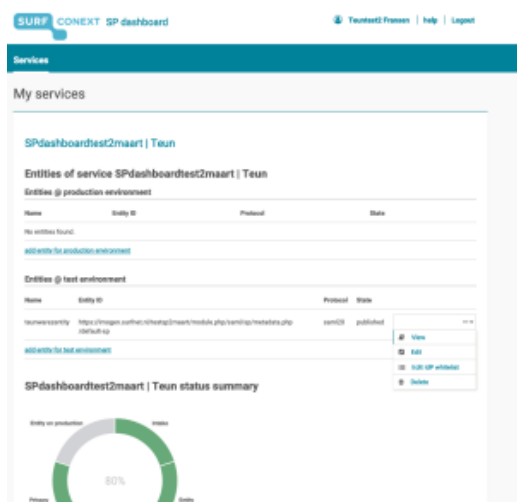

The create new entity modal has been updated. This allows you to select the protocol, and copy data from an entity you created earlier.
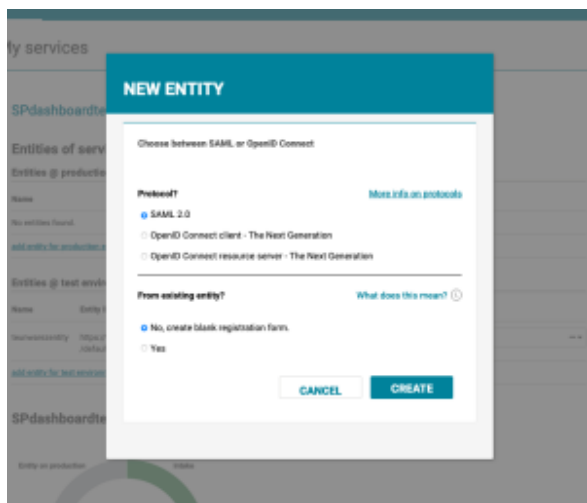

2019

Connection progress made visual

Connecting a service to SURFconext consists of several steps. All steps are now made visual in the SP Dashboard. If the donut is green, an institution is able to connect to your service.

Detailed entities overview

We have clarified the entities overview page, by making a clear distinction between test entities and production entities. In addition, the button for creating a new entity is more prominent.

View on entity

The only way to view the configuration of an entity was to edit the entity. We have added a view option. Various actions can also be taken from this screen.

Delete entity

In the previous version of the SP Dashboard it was not possible to delete an entity when published to the test environment. This has now been added. Deleting an entity is possible both from the detailed entity overview and the entity view page (see above).
