

Environments overview

SURFsecureID has two environments that can be used. The table below shows the differences between these environments.

	
• Environment for testing purposes only • Uses IDP's from SURFconext Test environment • No contract necessary • Do not use (privacy) sensitive information • No strict token registration process is necessary • Tokens are only valid in the test environment • No SLA • No costs	• Production environment • Uses production IDP's from SURFconext Production environment (production mode) • Holds privacy sensitive information from institutional users • Service Providers need follow the proper connection steps • Strict token registration process is necessary • Tokens are only valid in the production environment • SLA available • Institution is billed based on number of activated tokens. There are no costs for service providers.
Connection process for an institution / IDP: • Make sure your (test/acc) IDP is connected to SURFconext test • Light-weight process for requesting SURFsecureID in test Connection process for a Service Provider (SP): • Implement the technical connection to SURFsecureID test • Register your SP at SURFconext Connection process for a Second Factor Only service: • Implement the SFO connection to SURFsecureID test	Connection process for an institution / IDP: • Formal process for requesting SURFsecureID Connection process for a Service Provider (SP): • Follow the contractual part of connecting a service to SURFconext • Implement the technical connection to SURFsecureID • Register your SP at SURFconext Connection process for a Second Factor Only service: • Implement the SFO connection to SURFsecureID
