SAML Tutorials

If you are new to SAML and you want to build your application for use with SURFconext but you don't know were to start you have landed on the right page. Here you can start with the implementation of federated login on your service by following our guides. You can use these pages as a reference for your configuration and debug your application if needed. Use the navigation on the right to browse through the possible implementations like Wordpress, PHP, Shibboleth, etc. Search this part of the documentation to find your SAML related technical question with your first or existing service on SURFconext.
